4D v17 R6 compiler updated

In order to implement the new Get call chain command, the code generated by the 4D compiler has been updated. As a consequence, databases compiled with 4D v17 R6 can only be opened by 4D v17 R6 or higher. Databases compiled with previous versions need to be recompiled if you want to take advantage of the new Get call chain command.

Formula commands renamed

The "New formula" and "New formula from string" commands have been renamed to "Formula" and "Formula from string"

Note about macOS 10.15/Catalina

Since macOS 10.15 Catalina was just published two weeks ago, there hasn't been enough time to run our complete certification process and test everything. As such, 4D v17 R6 is not certified for Catalina. We used the Catalina beta release for testing and included the required modifications in 4D v17 R6. However since Apple frequently makes changes shortly before a final release, we'll need to run the full test cycle again for certification. As of today, we're not aware of any remaining problems in Catalina. 4D v18 will be fully certified for Catalina.
