4D v11 SQL Release 5 (11.5)	<i>Certified</i>	<i>Certified</i>	<i>Certified</i>

**Legend**

(1) 4D family: 4D, 4D Volume Desktop, 4D Server (4D Server not supported on PowerPC Processor).

(2) 4D products are not compatible with the 'Server Core' option of Windows Server 2008

(3) We would like to inform you that we have alerted Apple to a crashing issue that occurs after a number of successive calls to the system's Open File dialog (typically invoked with the OPEN DOCUMENT command, etc.). This has been identified as a Snow Leopard bug, and has been encountered by a number of other applications running under Mac OS X. At the time of this writing, the current Apple operating system (10.6.2) does not yet fix this issue, but as this bug is totally independent of 4D, 4D v11 SQL Release 5 will continue to function normally as of its resolution. This is why we have maintained the "Certified" status for this version, which should perhaps be considered as "certified under the current state of the system".

- Certified* All product functionalities have been through validation tests.
- Compatible* Some tests under this environment have not been carried out. If a problem occurs, an evolution to a called 'Certified' solution is recommended.
- Not Compatible* The product does not work under this environment.
- Does not exist.
